RESTRICTION INTO GROUPS

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25, 40-49, 51-62, and 63, drawn to *in vitro* method of identifying an inhibitor, classified in class 435, subclass 7.1.
 - II. Claims 26-39 and 50, drawn to an *in vivo* method of identifying an inhibitor, classified in class 424, subclass 9.2.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions because Group I is directed to an *in vitro* method of identifying an inhibitor while the claims of Group II read on an *in vivo* method. Thus, a method of identifying an inhibitor outside the body would not necessarily render obvious a method of *in vivo* detection.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
